

Debris Management for Flood Affected Residents

The City of Pembroke is providing this information resource for those who have been affected by the 2019 River Flooding. Additional resource material regarding recovery assistance are located on the City's webpage, www.pembroke.ca or by contacting the Municipal Office at 613-735-6821, Ext. 1409.

Sandbag Removal

Although water levels have receded, residents are urged to keep sandbag walls intact until there is no further threat of flooding.

Those residents who do have sandbags which need to be disposed of, can begin to **bring those sandbags to the roadside of their property OR to sandbagging station** where it will be collected over the coming weeks.

Sandbags left roadside in the affected areas will be collected

Used sandbags are likely to contain trapped bacteria and sewage matter. Please wear appropriate personal protective equipment when handling sandbags, such as gloves and face mask. Bags should not be cut open or used for sandboxes, playgrounds, or other areas where direct contact with humans or animals may occur. The sand should not be disposed of in a wetland, waterway, floodplain, or other environmentally sensitive or protected area.

Any leftover filled unused sandbags can be saved and stored or the sand can be used for construction, road work and preparing bases for concrete work.

Broken or cut bags empty of sand can be placed in garbage bags and placed curbside during regular garbage collection. Please contact the Operations Department at 613-735-6821, Ext. 1410 if you will exceed your normal garbage bag limit.
